

The North Carolina Agromedicine Institute, a University of North Carolina inter-institutional institute whose partners are East Carolina University, North Carolina State University, and North Carolina Agricultural and Technical State University. In addition to our university partners, the Institute relies heavily on its collaborative partnerships with the agricultural community, other universities, businesses, health care organizations, governmental agencies, and non-governmental organizations who are dedicated to identifying and addressing the health and safety risks of farmers, foresters, fishers, their families and communities in North Carolina and surrounding states in the mid-Atlantic region (i.e., Maryland, Virginia, South Carolina, Georgia, and eastern Tennessee).

Our goal is to reduce injury and illness by conducting research that leads to practical solutions and developing effective educational approaches that can be of benefit daily to the end user. Ultimately, we want farming, logging and fishing workplaces to be safe and healthy for all.

We offer health screening to include blood pressure, blood sugar, spirometry, height, weight, BMI, hearing and vision. With the screening one-on-one education is also provided to assist with acute and chronic medical conditions.
